

C++ Developers: Learn Portfolio Analytics

Our Portfolio Analytic team is building a world class system for risk management across a wide range of assets.

Focus Capital's Portfolio Analytic project is a great opportunity for talented developers from any industry such as defense or telecom, to work on state of the art asset management applications. We have over 35 years of creating cutting edge analytics for our investment management affiliates and we are looking for many hardcore C++ developers with at least three years of server side or GUI development to work in either database design or performance optimization of a state of the art risk management analytical system that covers a wide range of asset classes, that is fast becoming the diamond standard in the investment industry. This is a great way for the talented developers from across the country to come to NY and not only work with likeminded enthusiastic developers but to also learn about analytics, fixed income and derivatives. Our average developer has been with us 10 years and earns 250,000. We would love to do the same for you. Please send your resume as soon as possible.
