

## CORE

UNIX infrastructure development. World class team to build Wall Street's best OO development platform. We dream in real-time and our dreams become permanent fixtures in the real-world.

Job description: World class, NY based architecture group is seeking 30 additional senior C++ developers between now and year end to create a new state of the art application infrastructure enabling object oriented component based development projects. Non Wall St. backgrounds OK.

We're looking for Software Engineers with 3+ years of experience to join a team focusing on performing new research to evaluate machine learning and other sophisticated quantitative methods in the automation of financial data acquisition and assimilation. Experience working on research projects to process/mine large data-sets is strongly desirable.

Experience sought:

- C/C++/C#
- TCP/IP sockets (and/or Winsock)
- Multi-threaded / concurrent programming experience
- Some scripting: Perl, Ruby, bash, ksh, etc.

We also seek expertise in Hadoop
