

Java Gold

Focus Capital Markets, the leader in Wall. St. technology for 38 years, has formed a strategic partnership with one of the world's leading Web Services Conglomerates.

We have been transitioning many of our technology associates and directors into our new division and we need to hire an additional 35 senior Java/project leaders to create the software needed to expand our global footprint into over 100 countries.

These are leadership opportunities. This team is building and enhancing features across the web and devices and contributing to the technology infrastructure and platform. We need your help to develop and deliver on this vision in an iterative manner. Success means we lay the foundation for continued expansion of our company without disrupting already tremendously successful and much loved products

As an engineering leader on our team you'll be expected to lead by example, write great code, solve difficult problems, set a high bar for the team around you and help them achieve engineering excellence. We want you to execute on your ideas, challenge the status quo and generally make things better.

Qualifications

- Computer Science Degree (or similar)
- 8+ years of professional experience.
- Java or equivalent OO language, familiarity with Unix/Linux environments
- Well-rounded engineering skills; full-stack development experience - web + services - If you've built something in your spare time send us the link, we'd love to hear about it.
- A high-quality bar; just-enough documentation, unit testing, code reviews, test automation, continuous integration & deployment and a preference for agile methods
