

## **NY Senior Developers**

Focus Capital has two extraordinary projects we are gearing up for. We need 40 developers for each one.

The first is to create a new complex global mortgage backed securities system. This is a five year project that will require 40 new developers in our NY offices. Backgrounds should include C++, strong OO design and hands on multithreading. Things like integer ranges, thread-safe queues, string class, STL or Boost are expected to be used.

We also are looking for 40 people in NY for an Order management project that will revolutionize the way hedge funds and broker dealers trade. The technical requirements are the same as our MBS project.

In both instances we will accept non-financial backgrounds as long as the individuals show superior technical skills, excellent educations and impressive employed accomplishment.
